

Problem Statement

Startup Blueprint Generator using Agentic AI

Problem Statement

Many aspiring entrepreneurs and students have innovative business ideas but struggle to transform them into structured and investor-ready startup plans. Preparing a Business Model Canvas, conducting market research, identifying competitors, selecting suitable funding options, understanding government schemes, and creating a go-to-market strategy require significant expertise, time, and access to reliable information.

Existing AI chatbots often provide generic responses and lack the ability to perform specialized business planning tasks in a coordinated manner. This results in incomplete guidance and fragmented outputs.

Proposed Solution

The **Startup Blueprint Generator** is an AI-powered solution that uses **Agentic AI**, **IBM watsonx**, **GPT-OSS 120B**, and **Retrieval-Augmented Generation (RAG)** to automatically generate a comprehensive startup blueprint from a user's business idea.

The system employs multiple specialized AI agents that collaborate to:

- Analyze startup ideas
- Generate a Business Model Canvas
- Perform market and competitor analysis
- Conduct SWOT analysis
- Recommend funding opportunities and government schemes
- Develop a go-to-market strategy
- Create a 30-60-90 day implementation roadmap
- Generate an investor pitch deck outline

By combining a curated startup knowledge base with real-time web search, the solution delivers accurate, personalized, and actionable recommendations that help entrepreneurs transform innovative ideas into successful and investment-ready businesses.

Technologies Used

- IBM watsonx Orchestrate
- GPT-OSS 120B (OpenAI via Groq)
- IBM watsonx Knowledge Base (RAG)
- Agentic AI
- Langflow

- Web Search API

Expected Outcome

The system generates a complete startup blueprint that enables entrepreneurs to validate ideas, plan their business effectively, identify funding opportunities, and prepare for investors, reducing the time and effort required for startup planning.
